# Billy and the Bionic Badge

**This book is dedicated to the strong children with diabetes  
all around the world.**

**You are unique. You are amazing.  
You are so very special.**

Billy loved basketball more than  
anything in the world.

More than  
video games.

More than  
cartoons.

More than  
splashing his  
sister in the pool.

Billy took his basketball everywhere he went —the park, the movies, grandma’s house, even his bed (which his mom didn’t like).

And wherever he took his basketball, he would bounce and dribble,  
post and wiggle, shoot, and alley-oop.

He would crossover and jump, layup and bump, swish and swoosh!

At night he would dream about being a famous basketball player.

He would dunk, score, and shoot threes with absolute ease. He was a champion.

One day, Billy was playing basketball,  
and he wasn't feeling well.

He was too tired to bounce and dribble, post and wiggle, shoot, and alley-oop.

And he was too dizzy to crossover and jump, layup and bump, swish and swoosh. Something was wrong.

His parents had to take him to the hospital.

Billy was scared, but he took his basketball with him to make him brave.

At the hospital, Dr. Robinson sat Billy down. “Billy, you have type 1 diabetes,” said Doctor Robinson. “That means that you might feel sick if you eat or drink too much sugar, or shaky and tired if you don’t have enough. Your body needs help finding the right balance.”

“But this magical, round device will go on the back of your arm. It will let you and your parents check your glucose levels painlessly anytime<sup>1,\*</sup>! Wear it as a Bionic Badge and continue to live your life uninterrupted!”

“Will I be able to play basketball still?” Billy asked, concerned.

“You will,” said Dr. Robinson.  
“And when you feel better, you play better!”

So Billy decided to try out his new Bionic Badge while playing basketball with his friends.

“What is that?” a friend asked.

“It’s my Bionic Badge. I wear it for my diabetes,”  
said Billy.

“Really?” said one friend.

“Awesome,” said another.

“Let’s see it in action!” they all yelled.

Billy checked his glucose levels to make sure he wasn't too high or too low<sup>†</sup>. Then he said, "Let's do it!"

Billy played the best game of his life.

He bounced and dribbled, posted and wiggled, shot, and alley-ooped. He made a crossover and jumped, made a layup and bumped, swished, and even swooshed!

After that day, Billy knew nothing could stop him  
with his Bionic Badge by his side.

THE END

FreeStyle Libre 3 system is cleared to be used by children 4 years and older with Libre 3 sensor and 2 years and older with Libre 3 Plus sensor.

The FreeStyle Libre systems apps are only compatible with certain mobile devices and operating systems. Please check the Support section of our website for more information about device compatibility before using the apps. Use of the FreeStyle Libre systems apps may require registration with LibreView.

Medicare and other payor criteria may apply.

1. Data on file. Abbott Diabetes Care.

\* 60-minute warm-up required when starting the sensor.

† Default range is 70-180 mg/dL. Consult with a healthcare professional on individual target glucose range.
